For registration details and
more information about
the content, please contact
the Secretariat.

LANGUAGE

The course will be held in
Italian language with direct
translation in English.

TARGET

The course is intended for
technical graduated and
non graduated
professionals, engineers
and architects.

DESCRIPTION

Introductory course to the
independent profession of
Lighting Designers. The
course aims to provide the
tools to start a professional
career in the field of
lighting, so it includes both
issues closely related to the

professional practice and
the lighting market.

CONTENT

Topics that will be covered
during the course:

- Photometric fundamentals
- Outlines about the internal and European market
- Necessary tools to deal with the profession: the designer - entrepreneur
- Contents of the project in case of a LED installation (CIE TR205 / 2013)
- Professional services according to the budget
- Criteria for the definition of a professional assignment
- The relationship with the customer
- The production chain of lighting and the relationship with companies
- Criteria for the definition

of a tender and a final cost
- The lighting time
schedule and its link with
other work development
At the end of the course
participants will receive an
attendance certificate.
